Do we need a *security person yet?*

FOUNDER QUESTIONS

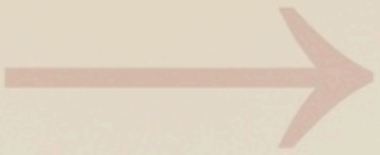

Founders ask me this around the time the first big customer sends a **security questionnaire.**

MICHAEL ADEYANJU

Short answer: *someone accountable.*

You need someone accountable for security long before you need a full-time hire.

1–2

Signals it's time *to get serious.*

1 Enterprise customers are sending security questionnaires, and sales is waiting on the answers.

2 You handle money, health data or other sensitive personal data.

3

Nobody owns *cloud permissions.*

You have more engineers than anyone can review code for, and nobody owns cloud permissions.

4

A regulator, *partner bank or investor.*

A regulator, partner bank or investor is asking how you manage risk.

“

Three steps before *a full-time hire.*

Name an owner on the team, get an outside review of your riskiest flows, and fix the basics (MFA, access reviews, secrets, logging).

What made you start taking security seriously? My DMs are open.
